

Sub-Zero & Wolf UK to Introduce One-Touch Coffee System
*Automatic 'Super-Barista' Features Easy Clean Up and Installation,
Coordinates with Wolf's Entire Product Suite*

Wolf Appliance Inc., the industry leader in premium cooking equipment, today announced the introduction of its all-new built-in coffee system as part of the New Generation product launch, the largest product rollout in company history. Available to consumers in spring 2014, this gourmet home coffee system makes professional-quality brewed coffee, espresso, cappuccino, latte, and macchiato, and perfectly steams and foams milk with a single touch. One-touch convenience also extends to the system's milk cleaning feature, which utilises steam cleaning and does not require any disassembly. The coffee system is available in stainless steel and black glass design styles and seamlessly coordinates with other Wolf products. Optional trim kits allow the opportunity to perfectly accessorize your coffee system to match your favorite E series or M series wall ovens.

"The coffee system is a new venture for Sub-Zero and Wolf, and one that we are incredibly proud to bring to market," said Jim Bakke, president and CEO of Sub-Zero and Wolf. "We've spent the last several years perfecting the coffee-at-home process, ensuring the creation of a flawlessly brewed coffee or beverage with just a single touch every time. The coffee system will meet the standards of even the most demanding home barista, and it is very easy to use and maintain."

Coffee System Performance Features

The one-touch, automated coffee system incorporates the following performance features to ensure consistent, delicious beverages:

Speed: A fast initial system warm up leads to swift coffee drink production, providing the perfect cup in no time. Beverages are ready to enjoy in minutes. An internal clock allows the user to power on the machine at a set time so it is ready to go when you are.

Easy Cleanup: This unique coffee system eliminates messy cleanup often associated with built-in coffee machines. With one touch of a button, a three-to six-second steam cleaning process is employed after each milk drink is prepared. Additionally, milk never enters the system's internal machinery, so no disassembly is required for cleanup.

Settings: Owners can tailor the coffee system to work with whole bean or ground coffee. Settings can also be customised to adjust water temperature, brew strength and liquid output. Personal preferences can be stored by using the system's "My Coffee" setting.

Water Reservoir: Conveniently located, the system's water reservoir can be easily accessed from the front without opening the unit. The reservoir holds a 2.27 litres. The system also contains a hot water dispenser for tea and other hot instant beverages.

Coffee System Design

The coffee system is stylishly designed and pairs effortlessly with Wolf's entire product suite:

Design Styles: Offered in M series contemporary black glass, professional and transitional stainless steel finishes, and E series framed and unframed stainless steel options; the coffee system unit has a width of 597 mm (23.5") and measures 762 mm (30") when installed with a trim kit.

Design Coordination: The coffee system is designed to seamlessly coordinate with other Wolf products through the use of a trim kit. Products can be paired horizontally or stacked vertically.

Simple Installation: A mounted glide system provides a quick installation and easy access to the unit. No plumbing is necessary.

Michele Bedard, vice president of marketing for Sub-Zero and Wolf, said, “At Sub-Zero and Wolf, we always strive to provide consumers with the highest quality kitchen appliances. That’s exactly what we’ve done with our brand new coffee system. The system is easy to use, easy to care for and creates gourmet beverages for our customers to enjoy.”

A third-generation, family-owned company, Sub-Zero, Inc., acquired Wolf in 2000. Sub-Zero and Wolf appliances are manufactured in the United States using only premium-quality materials that are proven to stand the test of time. About Sub-Zero and Wolf

Founded in 1945 and headquartered in Madison, Wis., Sub-Zero, Inc., is the leading manufacturer of American-made luxury refrigeration, freezer and wine storage products. Specializing in food preservation, Sub-Zero pioneered the concept of dual refrigeration and prides itself on being the first company to store frozen foods at ultralow, “sub-zero” temperatures. In 2000, Wolf Appliance, Inc., the premier maker of ranges, ovens, cooktops and grills, was acquired by Sub-Zero, establishing the brands as corporate companions and kitchen soul mates. In its third generation of family ownership, the privately held company also operates manufacturing facilities in Fitchburg, Wis., and Goodyear, Ariz. Both brands are continually recognized for the highest achievements in refrigeration and cooking innovation and customer satisfaction.
